

Swiggy Business Analysis Report

Business insights derived from the Swiggy Excel Dashboard project — covering sales performance, customer ratings, and ordering trends.

KPI Summary

The dashboard tracks four key performance indicators that define Swiggy's operational performance — total revenue generated, customer satisfaction, average spending per order, and total order volume processed.

₹53M

Total Sales

₹53,012,506 in total revenue generated across all orders

4.34

Average Rating

Strong customer satisfaction score maintained across orders

₹268

Average Order Value

₹268.51 average spending per order

197K

Total Orders

197,430 total orders processed

Bengaluru Leads in Sales

Bengaluru generated the **highest sales** among all cities tracked in the dashboard. As Swiggy's home market and a major tech hub, the city's dense urban population and high digital adoption contribute to its leading position in overall order volume and revenue.

Vegetarian Category Performance

Strong Category Performance

The **Veg category** performed strongly across the dataset, reflecting customer preference for vegetarian options. This trend aligns with India's significant vegetarian population and suggests that expanding veg-focused restaurant partnerships and menu promotions could further strengthen this category's contribution to overall sales.

Weekend Sales Surge

Higher Weekend Demand

Weekend sales are **comparatively higher** than weekday figures, indicating a clear surge in ordering activity during Saturdays and Sundays. This pattern suggests that customers tend to order more frequently on weekends, making it a critical window for targeted promotions, restaurant availability, and delivery capacity planning.

Fully Interactive Dashboard

The dashboard is **fully interactive using slicers**, enabling dynamic filtering and exploration of sales data across cities, categories, and time periods. Users can slice and drill into specific segments — such as city-wise performance, category trends, or weekend patterns — to uncover actionable insights from the underlying dataset.

Key Insights at a Glance

Top City

Bengaluru generated the highest sales among all cities tracked

Top Category

Vegetarian category performed strongly across the dataset

Peak Days

Weekend sales are comparatively higher than weekday figures

Interactive

Dashboard is fully interactive using slicers for dynamic filtering

What the Numbers Tell Us

Across 197,430 orders, the data reveals clear patterns in city performance, category preference, and ordering behavior. Bengaluru's dominance, the strength of the veg category, and the weekend sales surge are the three primary signals that emerge from this analysis.

These findings can guide decisions on city-level resource allocation, category-focused promotions, and weekend staffing strategies.

Dashboard Capabilities

What the Dashboard Offers

- Consolidated KPI view — total sales, average rating, AOV, and order count
- City-wise sales breakdown highlighting Bengaluru's lead
- Category performance tracking with veg category insights
- Day-of-week analysis revealing weekend sales trends
- Interactive slicers for filtering by city, category, and time period

Summary & Next Steps

This analysis of 197,430 orders and ₹53M in sales highlights three clear opportunities: deepen Bengaluru's market presence, invest in vegetarian category growth, and capitalise on weekend ordering peaks. The interactive dashboard provides a foundation for ongoing monitoring and data-driven decision-making.

Monitor City Trends

Track Bengaluru's lead and identify emerging cities

Expand Veg Offerings

Leverage strong veg category performance for growth

Optimise Weekends

Align staffing and promotions with weekend demand surge
